DERMULSENE™ RA 502

Description

Dermulsene™ RA 502 is an aqueous solvent free dispersion based upon rosin acid. It is recommended for use in pressure sensitive, adhesive tape and label applications. Dermulsene™ RA 502 is specifically designed to tackify a broad range of acrylic, SBR, and other water based synthetic or natural polymers; and was designed to give effective tackification with good adhesion properties. Dermulsene™ RA 502 also gives good mechanical stability when formulated and handled properly.

Typical Values

Characteristic	Value
Solid content (%)	50
pH at 20°C	7.5
Brookfield viscosity @ 20°C (mPa.s)	800
Softening point of base resin (°C)	63
Particle size (nm)	180

Analytical methods available on demand

Storage Conditions and Product Stability

Dermulsene™ RA 502 must be kept from freezing. Accordingly, shipments and storage should be made in insulated carriers and tanks when freezing conditions are possible. We also advise avoiding extended storage in temperatures above 40°C. Containers must always be kept closed, when not in use.

Under the above mentioned storage conditions, the shelf life of this product is up to six months.

Packaging

This material is always packaged through 50-micron filters and is available in polyethylene drums (210kg), 1 MT containers, or road tankers.

Regulatory Information

FDA: (21 CFR) 175.105
